

Pivotal Response Treatment (PRT)

for Supporting Young Children with ASDs in Home, School and Community Settings

This workshop is designed for parents and professionals working with young children with autism spectrum disorders (ASDs). Daniel Openden, Ph.D., BCBA, SARRC's clinical services director, will describe the development and implementation of Pivotal Response Treatment (PRT), an evidence-based intervention for teaching children with autism. PRT is a family-centered approach that may be implemented throughout the day and across natural environments such as in the home, at school or in the community. Dr. Openden will discuss procedures for improving the pivotal response of motivation to produce generalized improvements in language and social skills and reductions in disruptive behaviors. Video examples will be used to illustrate how professionals can implement the procedures throughout the day and across settings. Participants will receive a certificate of attendance for professional development.

The Southwest Autism Research & Resource Center (SARRC) is a nonprofit, community-based organization dedicated to autism research, education and resources for children and young adults with autism and their families. SARRC undertakes self-directed and collaborative research projects, serves as a satellite site for national and international projects, and provides up-to-date information, training and assistance to families and professionals about autism and related disorders. For more information about SARRC, call (602) 340-8717 or visit www.autismcenter.org.
